1277
1915
chemokine activity
TYROBP
extracellular matrix
regulation of peptidyl-serine phosphorylation
transforming growth factor beta receptor superfamily signaling pathway
immune response
cytokine receptor binding
response to external biotic stimulus
TEAD3
positive regulation of type I interferon production
cell-cell junction organization
neuron differentiation
ARID4A
regulation of mitotic cell cycle
RUFY3
blood vessel development
MATR3
cardiac muscle hypertrophy
SS18L2
DNAJC11
Z disc
NCAPH2
dendrite
chromosome organization
DHX33
immunoglobulin complex
intracellular glucose homeostasis
RAD51
adaptive immune response
chromosome
KRIT1
histone modifying activity
ATP-dependent activity
axon
catalytic activity, acting on a nucleic acid
DEPDC1B
ATP binding
epidermis development
WIZ
mitotic sister chromatid segregation
ARHGAP33
nucleoplasm
non-membrane-bounded organelle assembly
heart contraction
antigen binding
blood circulation
