protein localization to synapse
PTPN23
chemical synaptic transmission
synapse
DNA metabolic process
nuclear division
DNA repair
membrane
positive regulation of molecular function
chromosome
PSMA4
IFT80
signaling receptor binding
nuclear chromosome
epidermis development
VTA1
PIK3C2A
PIGS
UBR7
extracellular matrix
polymeric cytoskeletal fiber
intracellular organelle lumen
MPND
RPLP0
chromosome segregation
DPM1
PHF23
METTL13
regulation of mitotic cell cycle
metal ion binding
DNAJC11
POLR1A
EXTL3
mitotic cell cycle
MRPL43
RPL31
NUDCD3
FBXL3
microtubule cytoskeleton
positive regulation of cellular process
ALG1
non-membrane-bounded organelle assembly
GATB
immune system process
immune response
condensed chromosome
ZCCHC6
ZMYND10
skin development
circulatory system development
mitotic cell cycle process
LAS1L
DNA-binding transcription factor activity
protein-containing complex
immunoglobulin complex
ATP binding
antigen binding
ATP hydrolysis activity
nuclear receptor-mediated signaling pathway
ATP-dependent activity
antigen receptor-mediated signaling pathway
CD84
endolysosomal toll-like receptor signaling pathway
interferon-mediated signaling pathway
disruption of cell in another organism
transforming growth factor beta receptor superfamily signaling pathway
disruption of anatomical structure in another organism
